

Dry Verge System

Ridge Cap

The ridge caps work in conjunction with the dry verge system to contribute towards a neat and aesthetically pleasing finish to the verge for most types of rounded and angled concrete ridge tiles. The ridge caps provide durable protection at both ends of the ridge, removing the possibility of problems caused by water penetration whilst also preventing access into the roof cavity for birds and large insects. Each ridge cap can be quickly and easily fixed directly to the ridge batten in all types of weather conditions.

Features:

- Easy to fix and maintenance free.
- Mortar-free solution allows fixing throughout the year come rain or shine.
- Suitable for new build or refurbished situations on roof pitches between 15° – 55°.
- Prevents entry of birds and large insects into the roof cavity.
- Suitable for most makes of half round, segmental, universal angle and modern ridge tiles.
- Complies with BS 5534 requirements for mechanical fixings.

Packing Details :20 units

Weight :167g per unit

Material :Polypropylene (PP)

Manufacturing Process :Injection moulding

Available Colours :Terracotta, Brown, Grey, Black
